

In the Specification:

Please amend the second paragraph beginning on page 16 and continuing onto page 17 as follows:

Filter 320 is operative to filter solution 314 into a first portion 326 and a second portion 328 by allowing second portion 328 to permeate through membrane 321, as discussed above with respect to filters 20 and 220. Pump 336 is operative to return ~~permeate~~ retentate 352 to solution holding tank 334 by conduit 324. ~~Retentate~~ Permeate 354 is sent to waste or treated by further filtration or secondary methods of concentration as desired. Solution holding tank 334 or reservoir 312 may further include apparatus for agitating solution 314 as discussed above.
